The factors shown by statistical study to exert the greatest influence on the quality of the finished ingots, are described. Acceptable quality steels can be produced with coke pig iron. Care must always be taken to see that the manganese content of the charge is adequate. Initially, the rate of carbon elimination should be high (0.1% carbon in 10 minutes), falling gradually during the slag boil to 0.05% carbon per 10 minutes, and during the last half hour of working the heat, should not exceed 0.02% in ten minutes. The optimum tapping temperature for a steel containing 0.20% carbon and 0.70% manganese is 1590-1600°C. Deoxidation is (Metallurgy--Ferrous Metals, TT, v. 5, no. 2) (over)
